MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp
ADDRESS: 800 Claremont Ave. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT. | ACTUAL CONCENTRATION | MEETS ANSI STANDARD (<) 1.4 mg | DOES NOT MEET ANSI STANDARD (>) 1.4 mg |
|-------------------------|----------------------|--------------------------------|--|
| MARRIAGE Bureau 1948-49 | .14 | ✓ | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard IT9.1-1951 "a photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.

MANHATTEN

This is a scan of a blank page from a document. The page is mostly white with some minor scanning artifacts. There are dark borders along the top, bottom, and right edges, which appear to be the edges of the scanner bed or the paper itself. A small, faint dark speck is visible near the center of the page.

MANHATTEN

1972

A close-up photograph of a black and white calibration target or ruler. It features a series of bold, black numbers arranged in a grid-like pattern on a light background. The visible numbers include 20, 22, 25, 28, 30, 32, 35, 38, 40, 42, 45, 48, 50, 52, 55, 58, 60, 62, 65, 68, 70, 72, 75, 78, 80, 82, 85, 88, 90, 92, 95, and 98. The numbers are oriented vertically, with some appearing slightly tilted due to the angle of the shot. The overall appearance is that of a standard photographic scale used for size reference.

MICOR

30X

BIELS SINCE 1939
MICROFILM CORP

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp
ADDRESS: 800 Clarendon Ave Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

| TEST IDENT. | ACTUAL CONCENTRATION | MEETS ANSI STANDARD (< 1.4 mg) | DOES NOT MEET ANSI STANDARD (> 1.4 mg) |
|-------------------------|----------------------|--------------------------------|--|
| MAGNIFIC BUREAU 1948-49 | .14 | ✓ | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 19.1-45: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 mg for residual thiosulfate.
